

The Following list sent from individuals focusing on the following 3 principles (each email is listed on a separate page):

- Polluters should pay to use the atmosphere, and revenues should be used to compensate residents for higher energy prices and invest in a clean energy future.
- The carbon cap should cover all carbon entering the economy.
- Companies should not be allowed to buy cheap offsets overseas.

Dear Market Advisory Committee,

Thank you for your work to help implement California's Global Warming Solutions Act.

I believe a cap-and-trade system must be based on the following principles:

- Polluters should pay to use the atmosphere, and revenues should be used to compensate residents for higher energy prices and invest in a clean energy future.
- The carbon cap should cover *all* carbon entering the economy.
- Companies should not be allowed to buy cheap offsets overseas.

Please take these important principles into consideration.

Sincerely,

Deanne Thompson

7777 Bodega Avenue #M8

Dear Market Advisory Committee,

Thank you for your work to help implement California's Global Warming Solutions Act.

I believe a cap-and-trade system must be based on the following principles:

- Polluters should pay to use the atmosphere, and revenues should be used to compensate residents for higher energy prices and invest in a clean energy future.
- The carbon cap should cover all carbon entering the economy.
- Companies should not be allowed to buy cheap offsets overseas.

Please take these important principles into consideration.

Sincerely, Rebecca McGinnis

Dear Market Advisory Committee,

Thank you for your work to help implement California's Global Warming Solutions Act.

I believe a cap-and-trade system must be based on the following principles:

- Polluters should pay to use the atmosphere, and revenues should be used to compensate residents for higher energy prices and invest in a clean energy future.
- The carbon cap should cover all carbon entering the economy.
- Companies should not be allowed to buy cheap offsets overseas.

Please take these important principles into consideration.

Sincerely,
Braden Penhoet, JD, MBA

Dear Market Advisory Committee,

Thank you for your work to help implement California's Global Warming Solutions Act.

I believe a cap-and-trade system must be based on the following principles:

- Polluters should pay to use the atmosphere, and revenues should be used to compensate residents for higher energy prices and invest in a clean energy future.
- The carbon cap should cover *all* carbon entering the economy.
- Companies should not be allowed to buy cheap offsets overseas.

Please take these important principles into consideration.

Sincerely,

Valerie Sherron

Dear Market Advisory Committee,

Thank you for your work to help implement California's Global Warming Solutions Act.

I believe a cap-and-trade system must be based on the following principles:

- Polluters should pay to use the atmosphere, and revenues should be used to compensate residents for higher energy prices and invest in a clean energy future.
- The carbon cap should cover *all* carbon entering the economy.
- Companies should not be allowed to buy cheap offsets overseas.

Please take these important principles into consideration.

Sincerely,

Dear Market Advisory Committee,

Thank you for your work to help implement California's Global Warming Solutions Act.

I believe a cap-and-trade system must be based on the following principles:

- * Polluters should pay to use the atmosphere, and revenues should be used to compensate residents for higher energy prices and invest in a clean energy future.

- * The carbon cap should cover *all* carbon entering the economy.

- * Companies should not be allowed to buy cheap offsets overseas.

Please take these important principles into consideration.

Sincerely,

Brent Gudzus
PO Box 1427

Dear Market Advisory Committee,

Thank you for your work to help implement California's Global Warming Solutions Act.

I believe a cap-and-trade system must be based on the following principles:

- Polluters should pay to use the atmosphere, and revenues should be used to compensate residents for higher energy prices and invest in a clean energy future.
- The carbon cap should cover *all* carbon entering the economy.
- Companies should not be allowed to buy cheap offsets overseas.

Please take these important principles into consideration.

Sincerely,

Sharon A. Chang

P.O. Box 12 10903 Rock Point Drive

Dear Market Advisory Committee,

Thank you for your work to help implement California's Global Warming Solutions Act.

I believe a cap-and-trade system must be based on the following principles:

- Polluters should pay to use the atmosphere, and revenues should be used to compensate residents for higher energy prices and invest in a clean energy future.
- The carbon cap should cover *all* carbon entering the economy.
- Companies should not be allowed to buy cheap offsets overseas.

Please take these important principles into consideration.

Sincerely,
Randi Watson PO Box 863

6/11/07

Dear Market Advisory Committee,

Thank you for helping to implement California's Global Warming Solutions Act.

If you are going to use a cap-and-trade system, I urge you to adopt the following implementation principles:

- 1) Polluters must **pay** to use the atmosphere, and revenues will be used to compensate residents for higher energy prices, and also to invest in a clean energy future.
- 2) The carbon cap must cover **all** carbon entering the economy.
- 3) Companies must not be allowed to buy cheap offsets overseas.

Thank you for taking into consideration these important principles. As John Donne wrote, "No man is an island"--at least spiritually; but Planet Earth is in a sense an island in the universe. When we pollute the very air we all breathe on this "island," we are bound together physically in the worst possible way.
We need to stop poisoning ourselves.

Sincerely,

Richard W. Latimer
337 Pythian Road

Dear Market Advisory Committee,

Thank you for your work in helping implement California's Global Warming Solutions Act.

I think a cap-and-trade system should be based on the following:

1. The carbon cap should cover all carbon entering the economy.
2. Companies should not be allowed to buy cheap offsets overseas.
3. Polluters should pay to use the atmosphere with the resulting revenues to compensate residents for higher energy prices.

Please take these into consideration for your Solutions. Thank you.

Sincerely,

Larry Hanson
